Other products

We produce steel, stainless steel, copper, brass, bronze, zinc and aluminium fibers and wools. Our aim is to guarantee the highest standards of quality to our customers and to constantly innovate our production process and our range of products.

Green Steel Group is one of the leading producers of metal fibers and wools in the World: our main products are steel, stainless steel, copper, brass, bronze, zinc and aluminium fibers and wools.

We supply fibers to the most important brake pads producers worldwide. Our aim is to constantly innovate both the production process and our range of products. With its mechanical and technological know-how, our research and development department works everyday to implement new products and alloys to meet our customers' expectations.

Our history dates back to 1944, when we started producing steel wool for the household products industry.

Since the early years, all the machines for the production of metal fibers and wools have been completely designed and built by C.M.S., an internal division of the Group based in Italy. This technical know-how keeps our mechanical and technological equipment in constant evolution, granting the highest levels of productivity and quality.

Our Group strongly believes in the importance of quality, for both our equipment and our products.

Our laboratories constantly check all our fibers and wools during the production process, with both screen and volume analyses. The Quality Management System of the Group conforms to the UNI EN ISO 9001 standards. For us, green is not just part of our name, it's the focal point of our mission: our commitment to reaching the highest standards of quality is based on a deep respect for the environment.

Green Steel Solana
OGGIONO, ITALY

Green Steel Solana is the founding company of the Group. Located near Milan, it hosts the Italian commercial offices and a production plant.

C.M.S.
OGGIONO, ITALY

C.M.S. is the technical division of the Group, where all our machines and mills are designed and built in coordination with our R&D department.

Green Steel España
BARCELONA, SPAIN

Green Steel España is a commercial company that furthers the presence of the Group in the South European and Latin American markets.

Green Steel Poland
BIELAWY, POLAND

Green Steel Poland is a production company specialized in steel wools and fibers, equipped with drawing machines for the production of steel wire.

Green Steel Romania
TURDA, ROMANIA

Green Steel Romania is a production company focused on steel wools and fibers that expands the presence of the Group in Central and Northern Europe.

Tianjin Green Steel Metal Fibers
JIXIAN, CHINA

Tianjin Green Steel Metal Fibers is specialized in the production of copper and brass fibers, aimed at expanding the presence of the Group in Asia.

Green Steel Egypt
10TH OF RAMADAN CITY, EGYPT

Green Steel Egypt, a partnership with Egyptian Metal Fibers Inc., is a company specialized in the production of steel fibers based near Cairo.

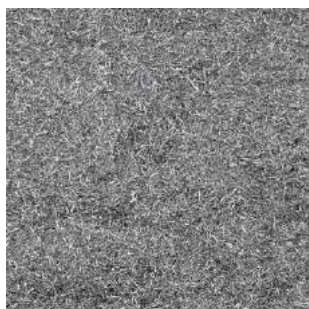

Green Steel Bosnia
ILIJAS, BOSNIA

Green Steel Bosnia, a partnership with Frimeco Produktions, is a company specialized in the production of steel fibers based near Sarajevo.

Our metal fibers are approved and used by the most important brake pads producers in the World. We offer a complete range of steel, stainless steel, copper, brass, bronze, zinc and aluminium fibers.

With a constantly evolving technical know-how and the versatility of our machines we are able to produce fibers of different lengths and diameters, according to the specifications of each customer. All our fibers are produced in total absence of oil: this makes them dry, odorless and easy to be worked. Their shape and roughness grant an excellent tightness inside the mixture.

Wools

Green Steel Group produces several kinds of metal wools that are used in different industries and for different applications.

From various innovative wools used in the construction industry for their high heat and electrical conductivity to our AISI 434 stainless steel wool, used by car and motorcycle silencers manufacturers for its insulating properties and resistance to high temperatures.

Our expertise in the production of metal wools brought us to cooperate with different research centers and universities over the years.

The next chapter is our newborn company Coppower: an outlet for our aim to constantly develop new copper-based solutions and find innovative applications for our products. Our range of copper wools has been approved as Antimicrobial Copper by the Italian Copper Institute.

Other products

Steel Fibers for Concrete

Green Steel Group supplies steel fibers for concrete, a product commonly used as a reinforcement material in the construction industry. Our concrete fibers are available with different lengths and are all approved according to the EN 14889-1 standard. Our R&D department is constantly working on new developments to keep this product at the forefront of the market and always focusing on identifying innovative applications for it.

Steel Wire

The raw material that we use for the production of steel fibers and steel wools is supplied directly by an internal department of the Group. Our drawing machines are designed and built by C.M.S. and they allow us to transform the rod wire according to the requirements of our production plants. In addition to producing it to cover the requirements of the Group, we supply different diameters of steel wire to several steel wool producers around the World.
